

## MPC-D / MPC-FP / MPC-CP

These compact station control panels feature a DCH Series 5500-5000 Remote Display combined with your choice of SCH (Series 5078) or LCH (Series 5080) Control Head

This compact and watertight (from top) package is especially suited to installations like wing stations where size is critical.

The SCH / LCH control heads provide single or twin levers for propulsion, thruster or machinery control and are available in a multitude of options using potentiometers, transmitters and switches (SCH only).

The DCH digital display is a dimmable multifunction screen that provides display of control and machinery status in imperial or metric units. Screens can be configured to display system alarms, control lever position, station transfer status, engine operating parameters available from engine serial link, shaft rpm and gear engagement / cp propeller position.
